

Footmark Media web hosting services:

Domain name registration:

We are able to offer competitive web hosting facilities and domain name registration.

We can register any domain name which isn't already registered starting from as little as £10 p.a.

We usually recommend that you register variations of your domain name as well as the more obvious .com and .co.uk versions, and will guide you towards additional marketing URLs to fit in with your search engine optimisation campaign and paper-based marketing. You will **own the URL** even if we register it on your behalf.

Website hosting:

We are happy to host your new URL and website, or help you transfer to us from another hosting company.

For websites requiring marketing forms, database driven content and certain types of interactivity we recommend that the website is hosted on our server for ease of access and updating.

Website user statistics:

If you wish to know how many people are visiting your website, which pages they are viewing and for how long, we can install software on your Footmark-hosted website to give you this information.

You will automatically be sent a report of your website via email as often as you require.

We recommend this service as part of your internet marketing strategy.

Website design, build and hosting packages:

We offer start-up packages for websites and online shops which include one year's free hosting, domain registration and user statistics as part of the package. For more information see >

www.footmarkwebdesign.com

Plug-ins:

For clients who require specific plug-ins and software such as Actinic, FrontPage or ColdFusion, we will source the most appropriate hosting service for you.

If you have any questions on our hosting services please don't hesitate to > [contact us](#) for more information and quotes on search engine optimisation
